PICHAMABOB

Have an iPhone?! Great!

Using an IOS application with **Swift** language. Our fantastically developers worked on a curve unparalleled learning and applying simultaneously! See UI to the left!

Database? Yes!

Our app uses a MySQL database hosted online using Amazon RDS and ngrok (allows any device to connect) with data being pulled through a custom API.

How is it Connected?

Using an IOS application, we have enabled a connection via Bluetooth Low Energy (BLE) to the T-Deck Plus. The T-Deck then transmits the signal via Low Range (LoRa) to the T-Watch S3.

This enables coaches to clandestinely communicate with players on the field, like the pitcher and catcher.
